Proposed Monitor and Report Only for 6 Rads 19OCT2021 w CA comments.docx

<!--[endif]--> Hi there. Can either of you answer a question about NPDES permits - specifically how some contaminants are "secondary" monitor and report only vs primary contaminants with specific limits? There are 4 or 4 radionuclides that are rarely or never detected in the current landfill and not expected to be a significant component of the EMDF waste stream. In such cases, can those rads be "monitor and report" rather than having limits set? I'm available all afternoon if you have a time for a quick call.
